

Importing Video into Premiere Elements

1. Click on the Organize tab
2. Click on Get Media
3. Click on DV Camcorder if you are importing from this type of video camera.

1. You probably want to check both these boxes so the video ends up on the timeline automatically and already split into scenes.
2. Use the Play and other controllers to find where to start copying the video.
3. Press Capture to start copying and then click stop when done.
